UI / UX DESIGN PROJECT

CONNECT+

One platform. Five social experiences.

A unified social media app inspired by Instagram, YouTube, Facebook, WhatsApp and Telegram.

Prepared as a UI/UX concept presentation

The idea behind CONNECT+

Bring the most-used social experiences into one clear, connected app.

Social sharing

Share photos, short videos, stories and updates with friends and communities.

Video discovery

Explore creator videos, short clips, subscriptions and saved playlists.

Instant communication

Chat, voice/video call, follow channels and share files in one place.

Design goal: reduce app switching while keeping each feature easy to find.

Five apps. Five strengths.

CONNECT+ borrows familiar interaction patterns—not the brands or exact interfaces.

Instagram

Stories, photo posts, reels and creator profiles.

YouTube

Long-form video, shorts, subscriptions and playlists.

Facebook

Community groups, events, pages and a social feed.

WhatsApp

Private chats, group conversations, calls and status.

Telegram

Channels, large communities, bots and file sharing.

Who will use CONNECT+?

Design for people who want a simple way to stay informed, entertained and connected.

Everyday users

- Share moments
- Chat with friends
- Watch entertaining videos
- Follow topics and creators

Creators

- Publish photos and videos
- Build an audience
- Manage comments
- Track engagement

Communities & groups

- Run group discussions
- Share announcements
- Create channels
- Coordinate events

Simple navigation keeps features discoverable

A five-part bottom navigation provides a predictable structure.

Home

Personalized feed, stories and updates

Explore

Reels, videos, trends and search

Create

+ Post, story, short video or update

Chats

Direct messages, groups and calls

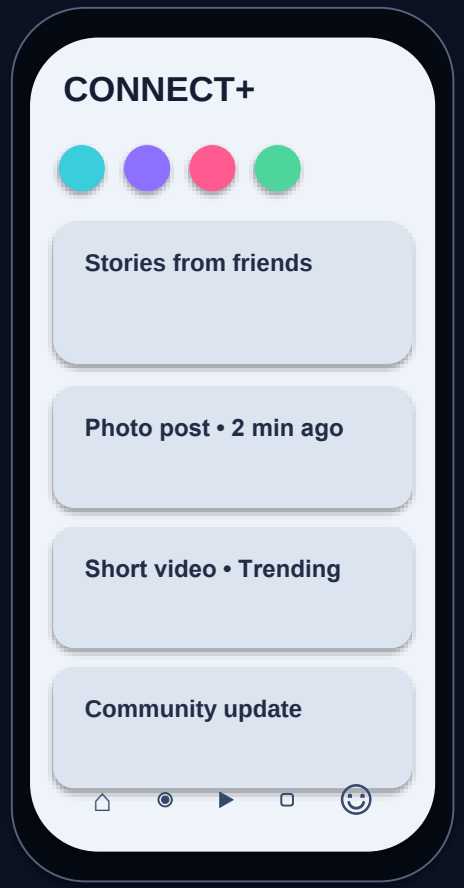

Profile

Posts, saved items, settings and privacy

Persistent navigation • clear labels • familiar icons • no hidden primary actions

Home feed and content discovery

A mixed feed makes it easy to move between updates, stories and video.

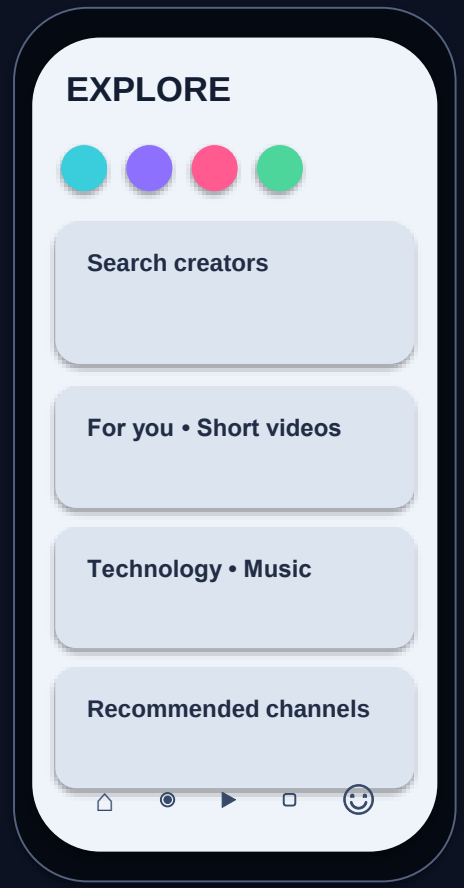

Feed hierarchy

Stories appear first, followed by posts and video cards with clear creator and time details.

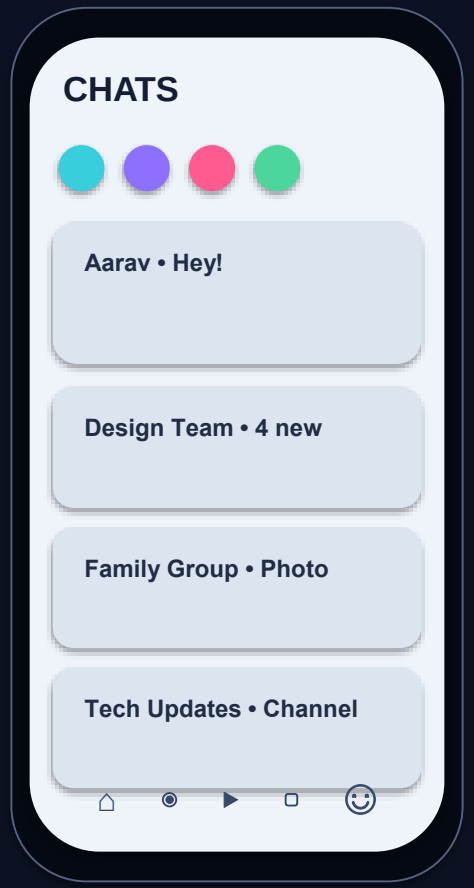

Explore controls

Search, topic chips and video categories help users discover relevant content.

Chats, groups and channels

A focused communication area separates private conversations from public updates.

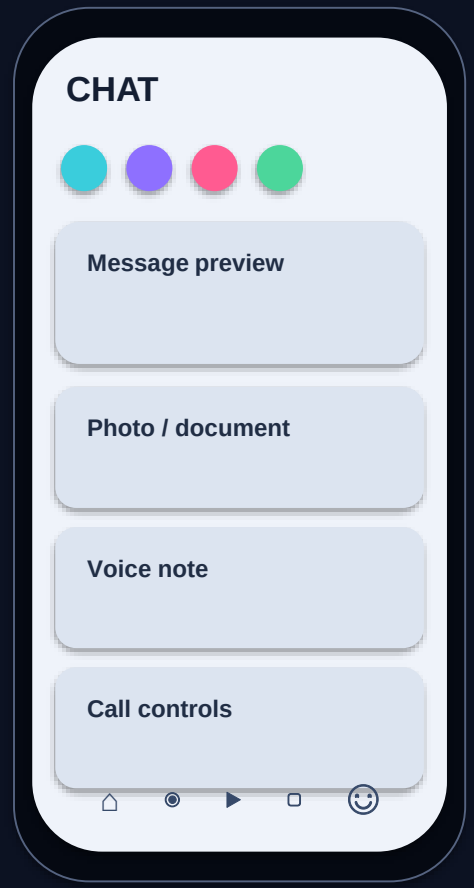

Private messaging

One-to-one chats, group conversations, reactions and media sharing.

Channels & communities

Follow public updates and join interest-based groups.

A consistent design language

A modern dark interface with bright accents supports a recognizable identity.

Midnight Panel Cyan Violet Pink Green

Typography

Use a clean sans-serif typeface, strong headings and readable body text.

Components

Rounded cards, clear buttons, consistent icons and accessible spacing.

Accessibility

Good contrast, scalable text, captions and touch-friendly controls.

A simple end-to-end user journey

Keep the most important actions short and predictable.

01

Sign up

Phone/email + secure verification

02

Personalize

Choose interests and follow people

03

Connect

Browse feed, watch and message

04

Create

Post, upload or start a channel

05

Manage

Privacy, notifications and profile

UX principle: guide first-time users with clear onboarding and helpful empty states.

Core features and trust

A social platform must balance convenience, safety and user control.

Core features

Accounts, feed, stories, video, messaging, groups, channels and profiles.

Safety & privacy

Block/report, account controls, audience settings and secure authentication.

Performance

Fast media loading, low-data options, search and reliable notifications.

Suggested MVP

Start with sign-in, profiles, feed, image/video posts, chat and notifications.

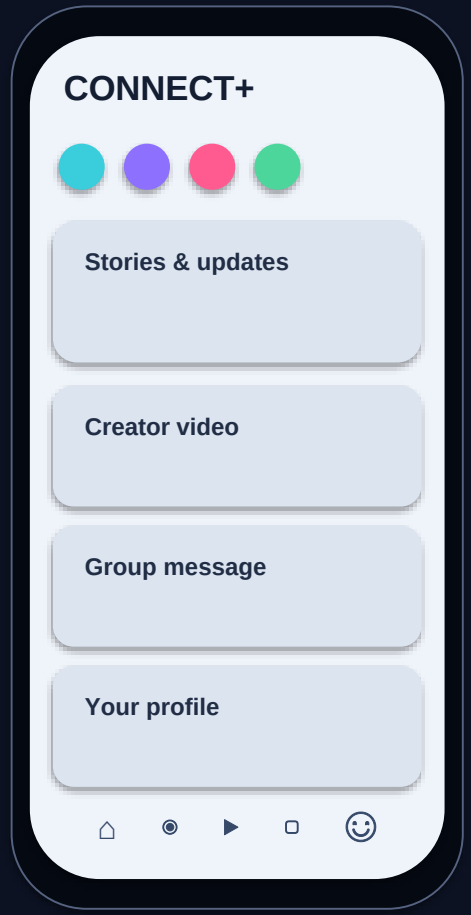

Future enhancements

Live streaming, creator analytics, recommendation controls and bots.

One connected experience

CONNECT+ brings content, communication and communities into a single product concept.

Less switching.
More meaningful connection.

The next step is to validate the design with users, build a clickable prototype and test the main journeys.

Thank you
