FOOD EMPATHY

Food Donation & Redistribution Platform

Connecting surplus food with people who need it — through donors, volunteers, NGOs and beneficiaries.

A concept presentation for a technology-enabled social good platform

The problem: food waste and food insecurity

Good food can go unused while nearby people and communities need reliable food support.

Surplus food

Restaurants, hotels, events, supermarkets and households may have safe, edible surplus food.

Unmet local need

NGOs, shelters and vulnerable communities need timely information about available meals.

Coordination gap

Finding, verifying, collecting and delivering donations can be difficult without a shared system.

Opportunity: make food donation easier, faster, safer and more transparent.

Introducing FOOD EMPATHY

A location-based platform that helps redirect safe surplus food to nearby communities.

Discover

Donors list available food with quantity, preparation time, pickup window and location.

Connect

NGOs and approved beneficiaries find suitable donations and request collection.

Deliver

Volunteers coordinate pickup and delivery, with status updates at each step.

Core promise: turn surplus food into timely community support.

Who uses the platform?

Each user role has a clear task in the food donation journey.

Food donors

Restaurants, hotels, event organisers, supermarkets and households list surplus food.

NGOs

Verify needs, request food, coordinate distribution and confirm receipt.

Volunteers

Accept delivery tasks, navigate to pickup points and update delivery status.

Beneficiaries

Access food support through partner organisations and approved distribution points.

How a donation moves from donor to recipient

A simple workflow keeps all participants informed.

01

Post food

Donor adds food details

02

Review

NGO checks suitability

03

Assign

Volunteer accepts pickup

04

Collect

Food is picked up safely

05

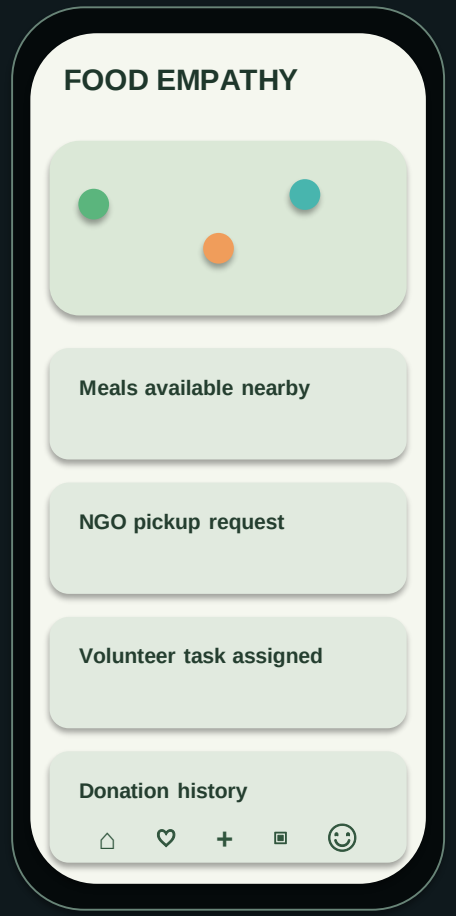

Deliver

Receipt is confirmed

Status examples: Available → Requested → Approved → Picked up → Delivered.

Key screens and interface structure

A clean mobile-first layout makes nearby donations easy to discover.

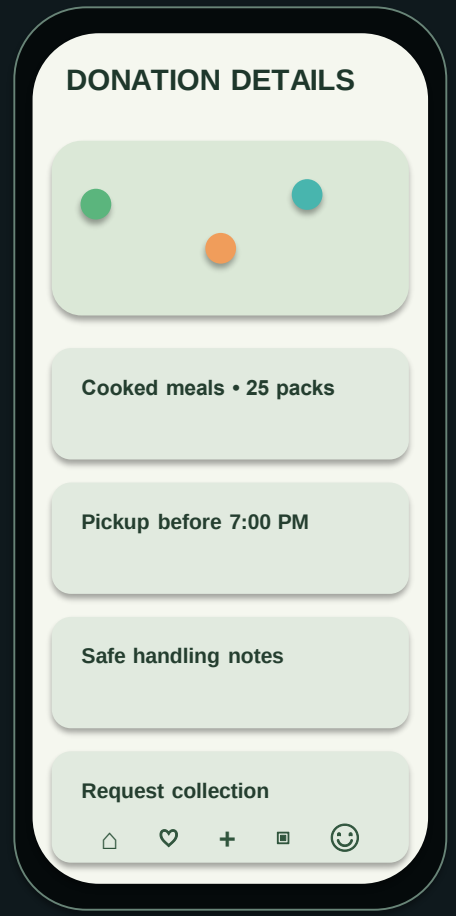

Home & map

Show nearby food listings, pickup distance and availability.

Create donation

A guided form captures food type, quantity, freshness and pickup time.

Features that support safe coordination

The platform should make every donation traceable from listing to delivery.

Location-based discovery

Find available donations and nearby collection points.

Real-time status

Track requests, approvals, pickup and delivery progress.

Notifications

Send alerts for new donations, approvals and pickup deadlines.

Role-based dashboards

Separate views for donors, NGOs, volunteers and administrators.

Donation history

Keep records of quantities, dates, recipients and outcomes.

Feedback & reporting

Collect feedback and flag issues for review.

Visual design: welcoming, clear and trustworthy

Use a warm, nature-inspired palette and readable interface components.

Forest green **Fresh teal** **Warm orange** **Soft lime** **Cream**

Typography

Simple sans-serif type with clear headings and readable labels.

Components

Donation cards, status chips, map pins and clear action buttons.

Accessibility

High contrast, clear language, large tap targets and multilingual support.

Food safety, privacy and accountability

A successful donation platform needs clear standards and responsible handling.

Food safety checks

- Capture preparation and expiry times
- Record storage and allergen details
- Set clear pickup deadlines
- Allow NGOs to reject unsuitable items

Trust & privacy

- Verify donor and partner accounts
- Share only necessary contact details
- Provide report and support options
- Maintain donation activity records

Operational reliability

- Confirm pickup and delivery
- Notify users about delays
- Provide fallback contact process
- Monitor cancellations and no-shows

Expected impact and next steps

Measure results with real pilot data and improve the service through user feedback.

Reduce avoidable waste

Track the quantity of food successfully redistributed.

Improve response time

Measure time from donation post to confirmed pickup.

Strengthen community reach

Track partner organisations and completed deliveries.

Phase 1 — MVP

User registration, donation listing, map discovery, NGO requests and status tracking.

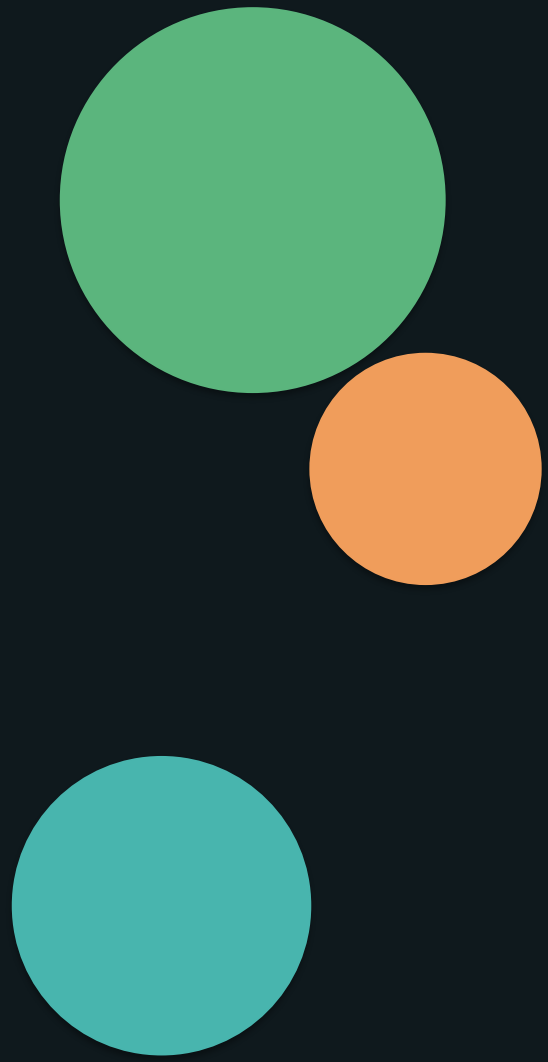

Phase 2 — Expansion

Volunteer routing, analytics, multilingual support and partner integrations.

FOOD EMPATHY

Share more. Waste less. Care together.

By connecting donors, NGOs, volunteers and communities, FOOD EMPATHY can help make safe food redistribution more organised and accessible.

Thank you
